

Nov. 25, 2018.

Dear Fujihara Seminar 2018 Participants

I am pleased that many cerebellar researchers gather together in the 75th Fujihara Seminar, **The Cerebellum as a CNS Hub**, held at Tokyo Medical and Dental University from Dec 1 to 4 in 2018. I am eager to see and hear from my old colleagues and young investigators on the most up-to-date views of the basic and clinical cerebellum research. I regret that I am unable to attend the Seminar to see all of you, as I am not in the complete health due to aging and currently stay in the nursing home with medical care. But please don't worry, I sometimes enjoy my favorite old Hollywood cinemas on TV

In the field of Neuroscience, this Seminar on the cerebellum is the first international conference sponsored by The Fujihara Foundation of Science. I thank to the Chairman of the Selection Committee of The Fujihara Foundation of Science, Dr. Nobutaka Hirokawa, for the generous financial support that makes this Seminar possible. I also thank to the organizers of this Seminar, Dr. Hidehiro Mizusawa and Dr. Shinji Kakei, for their great contribution to the planning and preparation. I sincerely wish a great success of this Seminar. This Seminar will help future advance of cerebellar research.

Finally, I hope that all participants of this Seminar enjoy hot discussion on the cerebellum. I also wish this Seminar will build a good international network in the field of cerebellum research.

Yours Sincerely

Masao Ito

The Honorary Professor of Physiology, Faculty of Medicine, The University of Tokyo.
The Honorary Scientist and Advisor, RIKEN.

Additional note from Soichi Nagao

Dr. Masao Ito asked us to give a greeting message for the Fujihara Seminar participants. He outlined the message with key sentences in the nursing home. Then I wrote the message in English with my colleague scientists.
